Notice of Product Rationalization

Models 142, 145 & 148 of the Rule Lever Pump Product Line will be obsoleted as of July 1st 2008

Due to the ongoing consolidation of product lines ITT Flow Control decided to obsolete the Rule lever pump models. The rationalization is due to low volume sales and increasing materials cost. ITT Flow Control will offer the Jabsco Amazon line of lever pumps as an alternative. The Jabsco hand pumps will not be a direct replacement in terms of size and shape, but will provide the same functionality.

Customers unwilling to change immediately: If there are circumstances where an OEM is not able to swap over within the given time period, ITT Flow Control will look at holding stock up to 6 months. These circumstances will be handled on a case by case basis – These requests need to be forwarded to Product Management by June 1st 2008 in order to accurately plan for this scenario.
